In Medicine, Failure Is Not An Option

## Do You Ever Ask Yourself?

- Are we efficiently managing our patient information?
- Am I wrestling to keep up with massive amounts of paperwork?
- How many hours — or even days — are required to finish coding patient charts?
- Are all of our patient information files secure?
- How many more patients could I see if we never had to spend time looking for misfiled or lost charts?
- How much time do I spend retrieving patients' charts?
- Is the office HIPAA compliant?

The **sIMon** ("Simple Information Managed Online") solution is a comprehensive records management system that connects to all of the existing practice management and administrative software applications your office currently uses.

## Less Paper / Less Cost More Efficiency

What is the real cost of paper forms, binders, charts, EOB's, transcription, faxes, copies, and all other paper records generated by a busy medical office? Calculating the cost of the square footage dedicated to the storage of patient charts and other paper documents yields some staggering overhead figures. Implementing the **sIMon** solution lets you use that space for new patient rooms and additional physicians as your practice continues to grow.

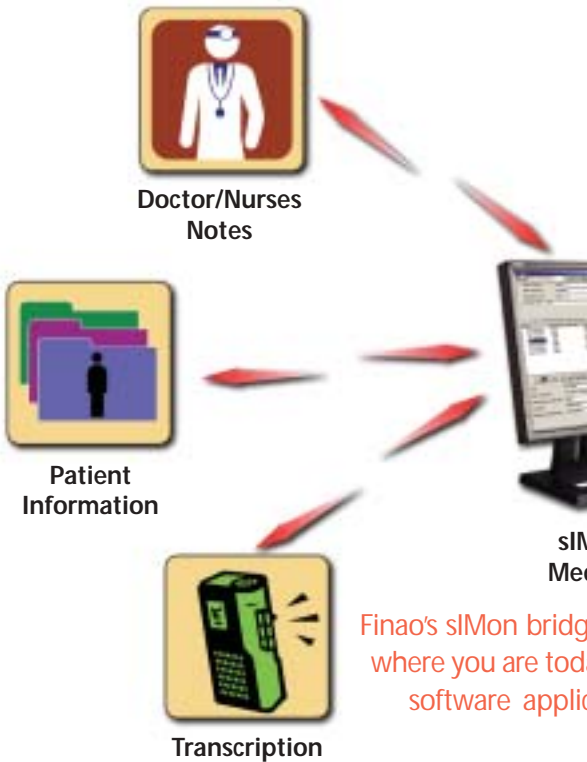

Many software vendors use the term "paperless" and attempt to force-fit your practice into their idea of a working environment. The **sIMon** system realistically targets a more accurate and achievable goal: *less paper*. sIMon is a true patient information management solution that takes into consideration your current mode of operation, including paper-based processes.

### Implement your business process

FINAO's sIMon system moves your practice from its current paper-based business process to a secure digital environment. Most software applications today force you to follow their business model. sIMon enables you to keep your current business processes intact. Mold your computer systems to your practice instead of changing your practice to fit the computer. Only change processes that help you squeeze inefficiencies out of your practice, not because that is the way the software requires your business to function. Do you have current business systems in place such as practice management, accounting, or scheduling? FINAO's sIMon is built upon a completely open framework allowing you to bring together your systems within a single framework.

### Recapture lost space

How much space do patient records occupy in your practice? Could you put that space to better use than simply storing records? Could you save annual record storage costs? With FINAO's sIMon, all patient records are stored and managed electronically. If necessary, inactive patient records can be moved to an electronic archive. Two, three-drawer file cabinets full of paper can be stored on a single CD-ROM. And with FINAO's sIMon, you do not have to remember which CD holds your patient information; to locate records, you simply need to know information about your patient such as medical record number, social security number, or name.

Finao's sIMon bridges where you are today software applic

# Not An Option

## Take your patient records with you

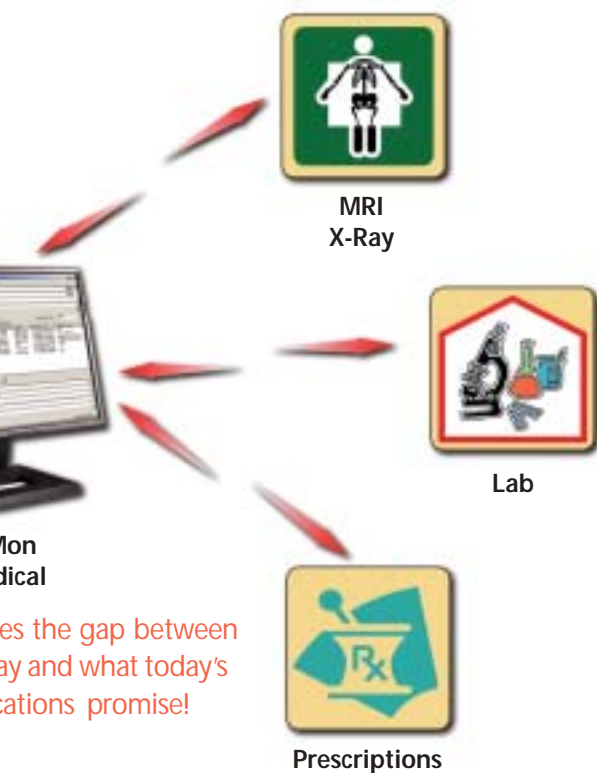

FINAO's sIMon provides physicians and other healthcare professionals with a "briefcase" paradigm. Users can select patient records and electronically "check out" individual pieces of information from the record. The selected patient information is loaded to a "briefcase" on your computer or device. While disconnected from your desktop or network, additional information can be added to the patient record or existing patient record data modified. When reconnected back in the office, the "briefcase" synchronizes with the master records adding or updating patient records as needed. Do not be disconnected from your patients' records simply because you are not in the office!

## Avoid security issues and fines

HIPAA has become a way of life today. With sIMon, you control who has access to medical records at your practice with a user name and password combination. If necessary, sIMon can record who accessed a patient's record as well as any changes made to the record.

## Collect payments faster

FINAO's sIMon helps your practice reduce errors that lead to delays in payment from third party payers. sIMon indexes all patient record information. This means that you can search for specific documents rather than read through all documents to find what you need to support a claim.

...es the gap between  
...ay and what today's  
...ications promise!

## Information Access Anytime Anywhere

Hospitals, physicians, nurses, and staff from multiple locations all need secure, immediate access to patient information. The **sIMon** solution provides fast and secure access to all patient medical information including lab results, consent forms, radiology images, transcription, dictation, etc. — no matter what the information, **sIMon** puts it at your fingertips.

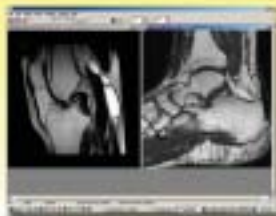

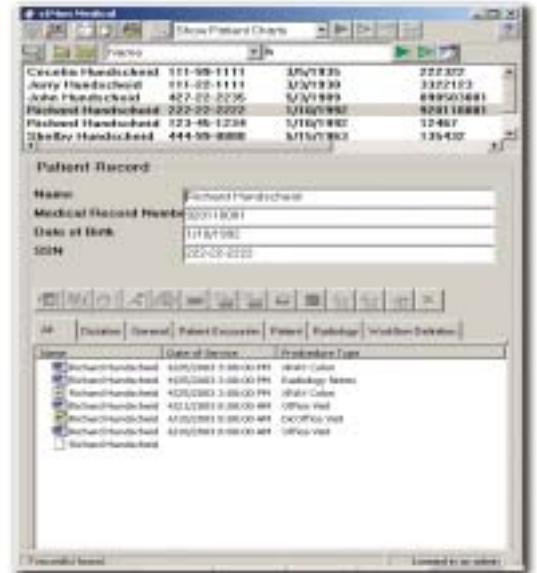

### The **sIMon** solution enables you to:

- Find records fast
- Sign documents electronically
- Keep all patient information in one place
- Dictate to your computer
- Ensure chart completion
- Increase security
- Track patient flow & records
- Automatically fill out pre-approved forms – Use your current forms in electronic format
- Auto generate lab forms with patient information; auto filing of patient records
- Never lose a patient file
- Link data to other systems
- Get rid of paper – reduce storage space
- Reduce keystrokes with auto filing

# sIMon — The Bridge That Connects Your Practice To The Future

*Just imagine... essential patient information made instantly accessible — down the hall, in a remote office, at the hospital, or around the world.*

The sIMon solution provides an affordable and easy-to-use interface that creates efficiency from chaos and saves both physician and staff time. This proven solution is a total digital records management system that results in more efficient operations, superior customer service, and secure, global accessibility.
